Konstantina Theofanopoulou is the Herbert and Neil Singer Research Assistant Professor at Rockefeller University and Visiting Scholar at New York University. She is the Director of the Neurobiology of Social Communication laboratory. Her research aim is to understand the neural circuits of complex sensory motor behaviors that serve social communication, specifically, speech and dance, and to identify possible therapies for speech and motor disorders.

For her Ph.D., she worked on the social reward mechanisms of vocal learning, studying the role of oxytocin in vocal learning in songbirds (e.g., Theofanopoulou et al. 2017 *Proceedings B*) and in human evolution of sociality, in general (e.g., Theofanopoulou et al. 2017 *PLOS ONE*, Theofanopoulou et al. 2022 *Compr. Psychoneuroendocrinology*). These projects led her to realize that the evolution of the oxytocin/vasotocin gene family was largely misunderstood, an issue that percolated down to an inconsistent gene nomenclature. Using computational genomic tools, she shed light on the evolutionary history of these genes and proposed a universal gene nomenclature (Theofanopoulou et al. 2021 *Nature*, Theofanopoulou & Jarvis 2023 *Nature*). This work laid the foundations for her current clinical projects on testing the therapeutic role of oxytocin in speech deficits.
